WWW.BRUNTONS-PROPELLERS.COM

Bruntons Propellers design and manufacture virtually all propeller types for virtually all types of vessels, from custom designed and built propellers for commercial craft, naval vessels and superyachts to specialist feathering and folding propellers for leisure sailing craft. As well as propellers the company can design and supply a full stern gear package which can now include a SigmaDrive anti vibration and noise unit.

Fixed propellers

For commercial, naval and leisure craft of all types and sizes. Custom designed for a specific vessel to ensure the highest levels of performance matched to the lowest possible noise and vibration.

SigmaDrive units

Easily fitted to new or existing craft with engines up to 1300hp, SigmaDrives can dramatically reduce noise and vibration. Models are available for virtually any type of drive, including waterjets, pod drives and V drive gearboxes.

Autoprop

No propeller has received the research and development of Bruntons Autoprop. The world's only auto pitching propeller is now used not just on cruising sailing yachts but on displacement workboats and on the new generation of hybrid craft which are now being developed where it's unique design is ideal for maximising the available power output of the vessel.

Varifold

For cruiser racer and racing sailing yachts Varifold proves its abilities time and time again. Varifold is the folding propeller that provides a sailing yacht with all the benefits of a fixed propeller when motoring to those of a low drag folding propeller when sailing.
